Number Paths

Write the missing numbers. Each one touches the next.
Sometimes the 1 and the last number are hidden.

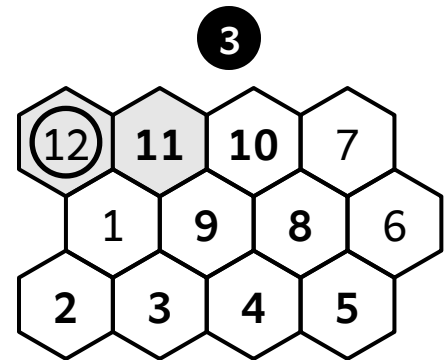

Trick: Find the ends

The 1 is not printed. It must touch the 2.

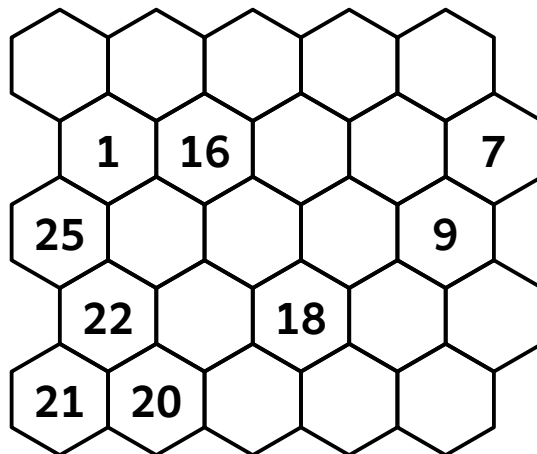

Only one empty cell touches the 2, so the 1 goes there.

Do the same at the other end: the 12 touches the 11.

Try it

The answer is with the other answers.

Talk about it: Ask: Which cell is the only one that can hold the 1?
